HIV and AIDS --- United States, 1981--2000

The AIDS epidemic, caused by HIV, found its way to the United States as early as 1960, but was first noticed after doctors discovered clusters of Kaposi's sarcoma and pneumocystis pneumonia in gay men in Los Angeles, New York City, and San Francisco in 1981. Treatment of HIV/AIDS is primarily via a "drug cocktail" of antiretroviral drugs, and education programs to help people avoid infection. Initially, infected foreign nationals were turned back at the U.S. border to help prevent additional inf

HIV/AIDS in the United States - Wikipedia

History of HIV and AIDS overview. The history of the HIV and AIDS epidemic began in illness, fear and death as the world faced a new and unknown virus. However, scientific advances, such as the development of antiretroviral drugs, have enabled people with access to treatment to live long and healthy lives with HIV.
