However, current Pattern Recognition methods have to deal with many challenges in order to recognize articulated motion and deformable objects.

Some of the difficulties

involve the highly articulated nature of the human body, different points of view, illumination changes, occlusions and missing data, and high visual variability in terms of background, clothes, skin, and complements, just to mention a few.

Articulated motion and deformable objects (AMDO) is a challenging research area which focuses on the automatic analysis of complex objects, such as the human body, exhibiting high variabilities both in terms of spatial and temporal dimensions.

All of these systems have different relationships between the hand position and the natural "forward" direction that apps should use for pointing or rendering objects in the user's hand. To support all of this, there are two types of 3D poses provided for both hand tracking and
